

# Public access and open space

## Foreshore access and pedestrian linkage

The waterfront boulevard will:

- improve public access to the foreshore
- provide a pedestrian and cyclist link between Batemans Bay town centre and Corrigans Beach
- be attractively landscaped
- include a lifting bridge over the marina entrance.

## Lifting Pedestrian Bridge

A hydraulic lifting pedestrian bridge will be placed over the existing marina entrance. It will allow uninterrupted public pedestrian and cyclist foreshore access between the town centre and Corrigans Beach.

It will provide sufficient clearance for motor craft up to approximately 2.5m in height to safely pass underneath. For all other vessels, the bridge will be opened and closed in a flexible, managed arrangement, and accommodate out of hours movements or special events. It will have safety and manual over-ride features, and will allow standard emergency access.

## New waterfront park

A new park, picnic and recreation area will be located in a picturesque waterfront location, overlooking the bay between the existing Hanging Rock boat ramp and the proposed new marina.

It will feature:

- full foreshore pedestrian access
- uninterrupted bay views.

Other features of the park may include:

- children's play equipment
- seating
- picnic facilities
- BBQ.

## Rotary Park

The proposed redevelopment will be located entirely within Marina land and will adjoin Rotary Park at its western boundary. The development will not encroach in any way into Rotary Park, but will occupy that area of Marina land where some picnic tables and swings exist.

Ariadne understands that these recreational facilities are important to many members of the community, and is exploring options to include picnic facilities, swings and a children's play area in the new waterfront public park.
